	Examiner Jacqueline F. Stephens	Art Unit 3761	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Lecuyer et al. USPN 5843013 in view of Hakim et al. USPN 4595390. Lecuyer discloses a valve which can be implanted in the body of the patient for the treatment of hydrocephalus comprising a housing forming a cavity; a separating membrane 15 mounted at its periphery on the housing, provided with an orifice 31 and delimiting within the cavity an upstream chamber 16 and a downstream chamber 17; the housing forming in the upstream chamber a seat 23 for the membrane 15; the seat surrounding the orifice; a rod 23 with a variable cross-section arranged so as to enter the orifice axially; means of supporting the rod 21 (col. 1, lines 5-22). Lecuyer is silent on the drive means and the adjustability of the valve. Hakim et al. teaches a magnetically adjustable valve where a magnetic field causes rotation of a member, which in turn drives movable portion of the valve. Hakim discloses the valve employs a cam and magnetic as drive means, which renders the valve adjustable. Hakim teaches an adjustable valve is important to vary the pressure in accordance with ventricle size and treatment objective. Additionally, Hakim teaches an adjustable valve is instrumental in correcting the

variation in pressure in manufactured valves. One having ordinary skill in the art would have been motivated by the teachings of Hakim to modify the invention of Lecuyer with a magnetized motor and cam arrangement to provide an adjustable valve.
